Education

Monash University Feb 2023 – Dec 2026
Bachelor of Computer Science (Advanced), Major in Mathematics *Clayton, VIC*

- Weighted Average Mark: 81.3/100; GPA: 3.50/4.00.
- Completed coursework: Advanced DSA (90), Programming Paradigms (89), Databases (86), Linear Algebra (81).
- Current coursework: Time Series & Stochastic Processes, Financial Mathematics.
- Award of Excellence in Object-Oriented Design and Implementation (90).

Microsoft Traineeship Program May 2021 – Aug 2022
Certificate IV in IT (Networking), Australian College of Commerce and Management *Melbourne, VIC*

- Earned Azure Fundamentals and MTA certifications in Windows Server Administration, Networking, and Security; recognised for academic performance in Virtualisation, Internet Protocols, and Network Security.

Experience

Backend Developer (Intern) Jan 2025 – Jun 2025
Jetstar *Melbourne, VIC*

- Independently designed and built a fault-tolerant, idempotent Python integration over raw REST APIs; converted **approximately 3,100 live SonarQube findings** into remediation-ready Jira tickets on a central board.
- Remediated **Veracode** findings in production C# services with senior engineers, addressing insecure cryptography and unsanitised input handling against **OWASP Top 10** patterns.
- Shipped JavaScript fixes for cross-system email validation and responsive UI; wrote PowerShell to scan **approximately 100 GitHub repositories** for a selective migration from an **80,000-file CDN estate** to S3.

IT Technician May 2021 – Dec 2022
National IT Solutions *Melbourne, VIC*

- Administered Microsoft 365 and Azure AD/Entra ID tenants for **50+ clients**: user lifecycle and licensing, security groups, Exchange Online mailboxes, and SharePoint site provisioning and permissions.
- Standardised onboarding for **1,000+ Windows endpoints** and approximately **100 iPads** through Intune, hybrid Azure AD join, Azure AD Connect, and Apple Business Manager; maintained PowerShell profiles, policies, app packages, and documentation.
- Maintained Windows Server estates across client sites, including Active Directory, Group Policy, domain controllers, DNS, and DHCP; resolved escalated server tickets and mentored trainees.

Selected Projects

Open-Source Contributions Java, PowerShell

- Contributed three merged fixes to Mineplex, a 240,000-line Java server: prevented a damage-log null dereference, corrected pitch-dependent player velocity, and reduced functional cognitive complexity.

Lobby Svelte, TypeScript, Supabase

- Placed **3rd at the 48-hour MACATHON 2026** with an anonymous building-issue platform; enforced multi-tenant isolation and resident/manager permissions through Postgres row-level security, streamed support counts via Supabase Realtime, and triggered priority notices at configurable thresholds.

SIG SuperMarket (Predictions Cup 2026) Python, REST APIs, WebSockets

- Participated in Susquehanna's simulated prediction-market competition; built an event-driven Python trading bot combining paired-outcome arbitrage with price convergence using Polymarket reference quotes. Implemented WebSocket market feeds, order-book validation, partial-fill reconciliation, and account-wide API rate limiting with reserved recovery capacity.

Skills & Extracurriculars

Languages: Python, C#, Java, C++, TypeScript, SQL, PowerShell
Technologies: Git, REST APIs, Azure, Vercel, Claude Code, Codex
Interests: Tournament poker, esports, volleyball, music production, graphic design
Extracurriculars: Susquehanna (SIG) Algothon 2026; UniMelb QTS Poker League (S2 2026)
